

T.Rex Request to Exit Detector

Features That Make a Difference:

- Accurate and adjustable detection zone
- Horizontal and vertical adjustment
- Unlocks or shunts door automatically
- Hands-free, no buttons to push

The Smart Exit Detector

T.Rex provides a complete solution to exit detection and door surveillance for access control applications. Outstanding innovations such as horizontal and vertical Detection Zone Targeting and DSP (Digital Signal Processing) make T.Rex the fastest and most reliable exit detector on the market today.

Horizontal and vertical targeting adds an extra layer of security by adjusting the detection zone. The detection area of the

T.Rex can be adjusted so that it will not "hit" the floor along the doorjamb, defeating any attempt to circumvent door supervision by sliding objects under the door.

In addition, it uses infrared detection coupled with DSP sampling to allow the T.Rex to accurately detect exits and prevent false "Door Forced Open" alarms.

Installation and Detection Pattern

Simple Two-Step Installation:

1. Choose Location
 - Recommended locations include door header, wall or ceiling.
 - Ensure clear line of sight from detector to every part of detection area.
 - Detection zone pattern is down and away from door (to inhibit tampering).
 - Do not place detector directly across from a window
2. Adjust
 - Can be adjusted to detect an individual either in front of door or several steps away from door.
 - Detection zone span and target direction is set by turning louver direction screws.
