

# IQ SHOCK-S QUICK INSTALL GUIDE

**STEP 1**

CHOOSE  
INSTALLATION  
LOCATION

**STEP 2**

DIP  
SWITCH  
CONFIGURATION

Three dip switches allow you to customize the behavior of this device:

### DS#1 - Test Mode:

ON: Enables sensitivity test mode.

*Please note, when test mode is enabled (ON) the IQ Shock will NOT transmit signals to the IQ Panel. This mode is only used for initial installation of the shock sensor.*

OFF: Disables sensitivity test mode.

### DS#2 - Pre-Warn:

ON: Enables pre-warn sounder and red LED.

OFF: Disables pre-warn sounder and red LED.

### DS#3 - Reed Switch:

ON: Enables reed switch.

OFF: Disables reed switch.

### **IMPORTANT NOTE:**

*The IQ Shock is intended to be installed on doors with or without glass inserts and on window frames but not on the actual glass surface.*

## SPECIFICATIONS

Frequency: 319.5MHz

Battery: 3V lithium CR123A

Magnet gap: 1 inch max

Operating Temperature: 32°-110°F (0°-45°C)

Operating Humidity: 5-85% RH non-condensing

Compatible with Qolsys control panels

Supervisory signal interval: 60 min (approximately)

Potentiometer: Shock sensitivity adjustment

**STEP 3** OPEN DEVICE CASING

Push tab to open the device.

**STEP 4** PULL BATTERY TAB

**STEP 5** SECURE SENSOR & MAGNET

**STEP 6** LEARN INTO PANEL

Place your panel in "autolearn" mode

Open/close magnet  
OR  
Tap cover

Customize name and settings as desired and touch "ADD"

*\*If dip switch #1 is on, no RF transmission is generated by the sensor and it will not auto learn. Dip switch #3 must be on for the reed switch to work.*

**STEP 7** ADJUST SHOCK SENSITIVITY

### Adjusting the Shock Sensitivity:

Adjust the shock sensitivity from the final mounting position. Test shock sensitivity by moving dip switch 1 to ON (enable test mode). While in this mode a short beep and green LED will flash when the unit detects a pre-warn threshold. A long beep and red LED will flash when the unit detects a shock level strong enough to trigger an alarm at the control panel. **Please note that no RF transmission from the sensor occurs during sensitivity test mode.**

Gently hit (using the palm of your hand) the surface on which the device is installed. Gradually increase the pressure or turn the shock sensitivity adjustment dial clockwise with a small screwdriver until the desired response is obtained. Ensure that the device is not triggered by accidental vibration (e.g., wind, birds, window coverings) hitting the protected window or surface. Normal traffic or operation of the door/window should not trip the shock sensor. When testing the sensitivity of the unit, do not cause stress or damage to the mounting surface or to the glass. **WARNING: In order to avoid personal injury while testing sensitivity, do not apply pressure to glass inserts or windows.**

Move dip switch 1 to OFF (disable test mode) once shock sensitivity has been set to the desired level. Verify that the IQ Shock properly communicates properly with the IQ Panel.

Document#: IQSS-QG-10-10

Revision#: 10/10/17
